

## Pumps • Hose & Fittings • Valves • Industrial Goods

Our hose capabilities and configurations are endless – with crimp capabilities to 10". If you need help selecting the right hose for the job, just call on the experts at Munro Supply.

### What is the best type of hose for my application?

Important aspects for choosing the right type of hose can be summed up in an easy to remember acronym: **STAMPED**

**Size** — Inner diameter and length

**Temperature** — Minimum and maximum of the material conveyed and environmental expectations

**Application** — How will the hose be used? Suction or discharge? Will it be dragged? What is the environment the hose will be in?

**Media** — What will be going through the hose? Is it water, chemicals, fuels or something else? Dirty water or clean water?

**Pressure** — To how much pressure will the assembly be exposed?

**Ends** — What type, orientation and attachment methods are needed?

**Delivery** — What are the testing, quality, packaging, and delivery requirements?

### Common hose types:

Suction (can be used for discharge if shape is required)

- PVC Clear – a basic, economical option
- PVC OD critical schedule 40 sized (spa hose) – for applications where glued joints are necessary
- PVC Industrial Strength – fabric reinforced hose with external drag helix
- Rubber – smooth cover, good for water applications
- Oilfield Suction – offers durable external cover and enhanced bend radius and is acceptable in applications where hydrocarbons may be present

Discharge Layflat Hose – easy to bring to a job site and roll out for immediate use

- PVC Layflat Blue – for lower pressure applications – Max. 40–80 PSI
- PVC Layflat Red – for medium pressures – Max. 100–150 PSI
- Mill Hose – includes a cloth cover for added durability – Max. 150 PSI
- Rubber Discharge Hose – industrial strength discharge hose
- General Purpose Air & Water Hose – when garden hose will not cut it... this heavy duty hose is perfect for spray down applications or air compressor service

### Common hose end fitting options

King Nipples

C - Cam and Groove Coupling

E - Cam and Groove Coupling

Groove King Nipple

Crows Foot

Ball & Socket

Pin Lug
